HUSTLER®

APPLIC8R LX1150 203 PACK

- 1150L Tank
- 14m EagleTech Boom
- ErgoMax
- 3 Section Electric Controls
- 100L Flush Tank

APPLIC8R LX1150 202 PACK

- 1150L Tank
- 12m Sonic Boom
- Storage Box
- 3 Section Electric Controls
- 100L Flush Tank

Why Hustler boom sprayers are the world's best.

With the industries best warranty, unique best in class agitation and mixing, Toughest design on the market, user-friendly low profile tanks with a Hustler boom sprayer, you're covered.

HUSTLER APPLIC8R BOOM SPRAYERS
are the sturdiest, most versatile boom sprayers on the market.

VIZIGAUGE™

Our unique ViziGauge is visible from 120 degrees, so whether in your tractor seat or on the ground you can easily see your tank level and how much fluid you have left. A floating ball tube gauge makes it easy to read the calibrated ViziGauge™ which now features both Gallons and Litres and provides more tank filling accuracy with our unique mould-in permanent graphics.

INTEGRATED TOOLBOX

Integrated into the design is a handy toolbox that's quick and easy to open, and has plenty of space for spare nozzles, filters and the controllers when the sprayer's not in use.

COUPLEUP™ FILLING SYSTEM

Filling's a snap! Fill as you normally would through the lid or with our unique CoupleUp™ 2" tank filling system. If you have a mixing station or trash pump you can fill directly using that pump, or you can utilise the Applic8r's own pump to fill out of a trough or stream with an optional 5 or 10 metre (5.5-11 yd) filling hose.

LARGEST LID WITH SPILL RING

The largest 455 mm (17.91") lid to the tank with larger sieve, has a built-in hinge so that you can't lose the lid during transport and filling. We've also added a spill ring around the lid to catch any accidental spillages to save them getting on the operator.

HANDWASH TANK

Built-in 18-litre (4.755 gallon) tank for clean water so that you can wash your hands once finished. Makes spraying with an Applic8r enjoyable.

DEEP SUMP

A generous sump size is all part of the design. You can spray on steep terrain without sucking air or leaving missed patches, and you'll empty the entire tank, even when operating on the steepest of terrain.

SLICKFIT™ CONTROLS

The Applic8r range comes standard with a 3-section control system and thanks to our unique SlickFit™ system, you can swap controls in a flash from the most basic of manual controls right through to a full ISO GPS control system with automatic section controls. The choice is yours!

REAR MOUNTED PUMP

The unique design of a rear-mounted, offset pump allows for the longest PTO shaft in its class. There is less angle of the joints, making for a longer-lasting shaft, which enables the sprayer to run whilst on the ground. You can fit the Applic8r to any tractor size without needing to cut or lengthen the PTO shaft.

ADJUSTABLE VALVE MOUNT

Ideal for manual options, this makes the controls easier to reach, and when the sprayer is parked in the shed the valve can be adjusted out of harm's way.

ISO LINKAGE MOUNTS

The Applic8r's 3-point mounts are built to ISO standard, unlike most other sprayers. This means you no longer need to park your sprayer on a stack of pallets for the 3 point linkage to reach it, and it fits both fixed and floating 3 point linkage arms making it quicker and safer to hook up.

NOZZLE CHART

Now showing L/Ha and G/Ac our unique nozzle chart is permanently moulded into the polymer of the tank, so you'll never need to go searching for a nozzle chart again, and helps the operator get set up and spraying quicker every time.

UNIQUE CHASSIS DESIGN

Compact and built to last, it has the biggest section in its class! The unique straight-through chassis design and careful attention chassis/tank/pump integration has allowed Hustler to produce the toughest and most compact sprayer available today. The Applic8r's chassis has been CAD tested for stress and real-life tested for fatigue on our destroyer, where it lasted longer than 4 times the required benchmark.

LARGER PUMPS

Applica8r is spec'd with a larger than normal pump, to ensure your sprayer is future-proofed. Standard with 29 gal/min Comet diaphragm pumps for longer service intervals and the ability to handing liquid fertilizers. Any fluid is only in contact with either plastic or stainless-steel parts which eliminates any chance of corrosion.

BUILT-IN SKIDPLATE™

A tough built-in SkidPlate™ protects the vital parts – including the pump, tank, filters and drain – from damage, should you misjudge a hump or hollow.
